

Build Green CEE - Energy Efficient and Ecological Design for the Region

23-24 April, 2008

Discover the growing demand for energy efficient and ecological building products and services in Europe's most promising construction region – Central and Eastern Europe. The conference will explore the improving business case for eco-efficient design and sustainable construction in an environment of rising energy prices, more stringent building codes, newly available technology and specialized financial products.

Build Green CEE will bring together visionary investors, real estate developers, construction companies, architects, engineers, technology and service providers, building management companies, real estate agencies, students and professors, NGOs, and public authorities eager to explore and benefit from the opportunities of building green.
